SUMMARY

Senior Backend Engineer specialized in Python, FastAPI, PostgreSQL and Clean Architecture. Designed and operated production-grade authentication, authorization and secure API platforms with JWT RS256, OAuth2/OIDC, TOTP 2FA, refresh token rotation and device sessions. Strong focus on performance (async I/O with asyncpg), reliability (observability, SLOs), and developer experience (typed DTOs with Pydantic, SQLAlchemy 2.0 async).

CORE SKILLS

Programming: Python, TypeScript, Go (basic)

Backend: FastAPI, Django, Node.js (Express), AsyncIO, Celery

APIs/Security: REST, OAuth2/OIDC (Google, Apple, Microsoft), JWT (RS256), RBAC, TOTP, Rate limiting, Idempotency

Databases: PostgreSQL (query tuning, indexes, partitions), Redis, MongoDB

Data/ML: pandas, NumPy, scikit-learn (foundation)

DevOps: Docker, Kubernetes, GitHub Actions, AWS (ECS, RDS, S3), Nginx, Traefik

Testing/Quality: Pytest, Coverage, Hypothesis, Locust (perf), Black, Ruff

Tooling: Poetry, pip, Make, Pydantic v2, SQLAlchemy 2.0 (async with asyncpg), Alembic

EXPERIENCE

2023–Present — Senior Backend Engineer, ACME SaaS (Remote)

- Designed an authentication microservice (FastAPI + PostgreSQL + SQLAlchemy 2.0 async) with local auth + Google/Apple/Microsoft OAuth2, JWT RS256 (private/public keys), refresh token rotation & reuse detection, device/session tracking and TOTP 2FA.
- Implemented invitation flow with securely hashed tokens (SHA-256), expiration, single-use semantics, and SMTP/Microsoft Graph email delivery. Hardened inputs, added rate limiting and correlation IDs.

- Reduced p95 latency by 45% with query tuning, asyncpg, statement caching, strategic indexes and read-path refactors. Added dead-letter queues and retries for external calls.
- Built global error middleware (French error messages + structured logs), audit trail (security events), and end-to-end request tracing. AuthZ with role/permission guard and resource scoping.
- Automated CI/CD with Docker and GitHub Actions; deployed on Kubernetes with blue/green releases and zero-downtime migrations.

2021–2023 — Backend Engineer, BetaCorp (Remote)

- Delivered a document-management API (FastAPI) with S3-compatible storage, background OCR/PDF processing workers and webhook callbacks with idempotency.
- Implemented signed URLs, multipart uploads, and async ingestion pipelines. Achieved 99.95% availability and clear SLOs.

EDUCATION

B.Sc. in Computer Science — State University, 2018

CERTIFICATIONS

- AWS Certified Developer – Associate (2022)
- PostgreSQL 12 Associate

PROJECTS

- clean-auth-fastapi — Reference auth server (FastAPI + PostgreSQL + SQLAlchemy 2.0 + JWT RS256 + OAuth2). Clean Architecture (domain, application, infrastructure, presentation), async everywhere, unit tests.
- data-pipeline — ETL with async ingestion, exponential backoff, circuit breakers, and DLQ.

LANGUAGES

English (C1), French (B2)
